

Roburst Network

The next-gen cashless payment

The power of cryptocurrency, now at your hand!

What is Roburst Network ?

o o o

Roburst Network is what we call, the next-generation of cashless payment. With the ability of transferring approximately 100,000 transactions per second, Roburst Network could deliver money in a blink of an eye with the lowest cost possible. Below is our core features that help distinguish Roburst Network with others.

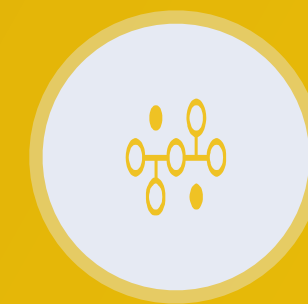

Fast

Transactions are done in a proper way that could compete with Visa and Mastercard.

Secured

Compiled with the latest security standards, Roburst Network also supports multi signature.

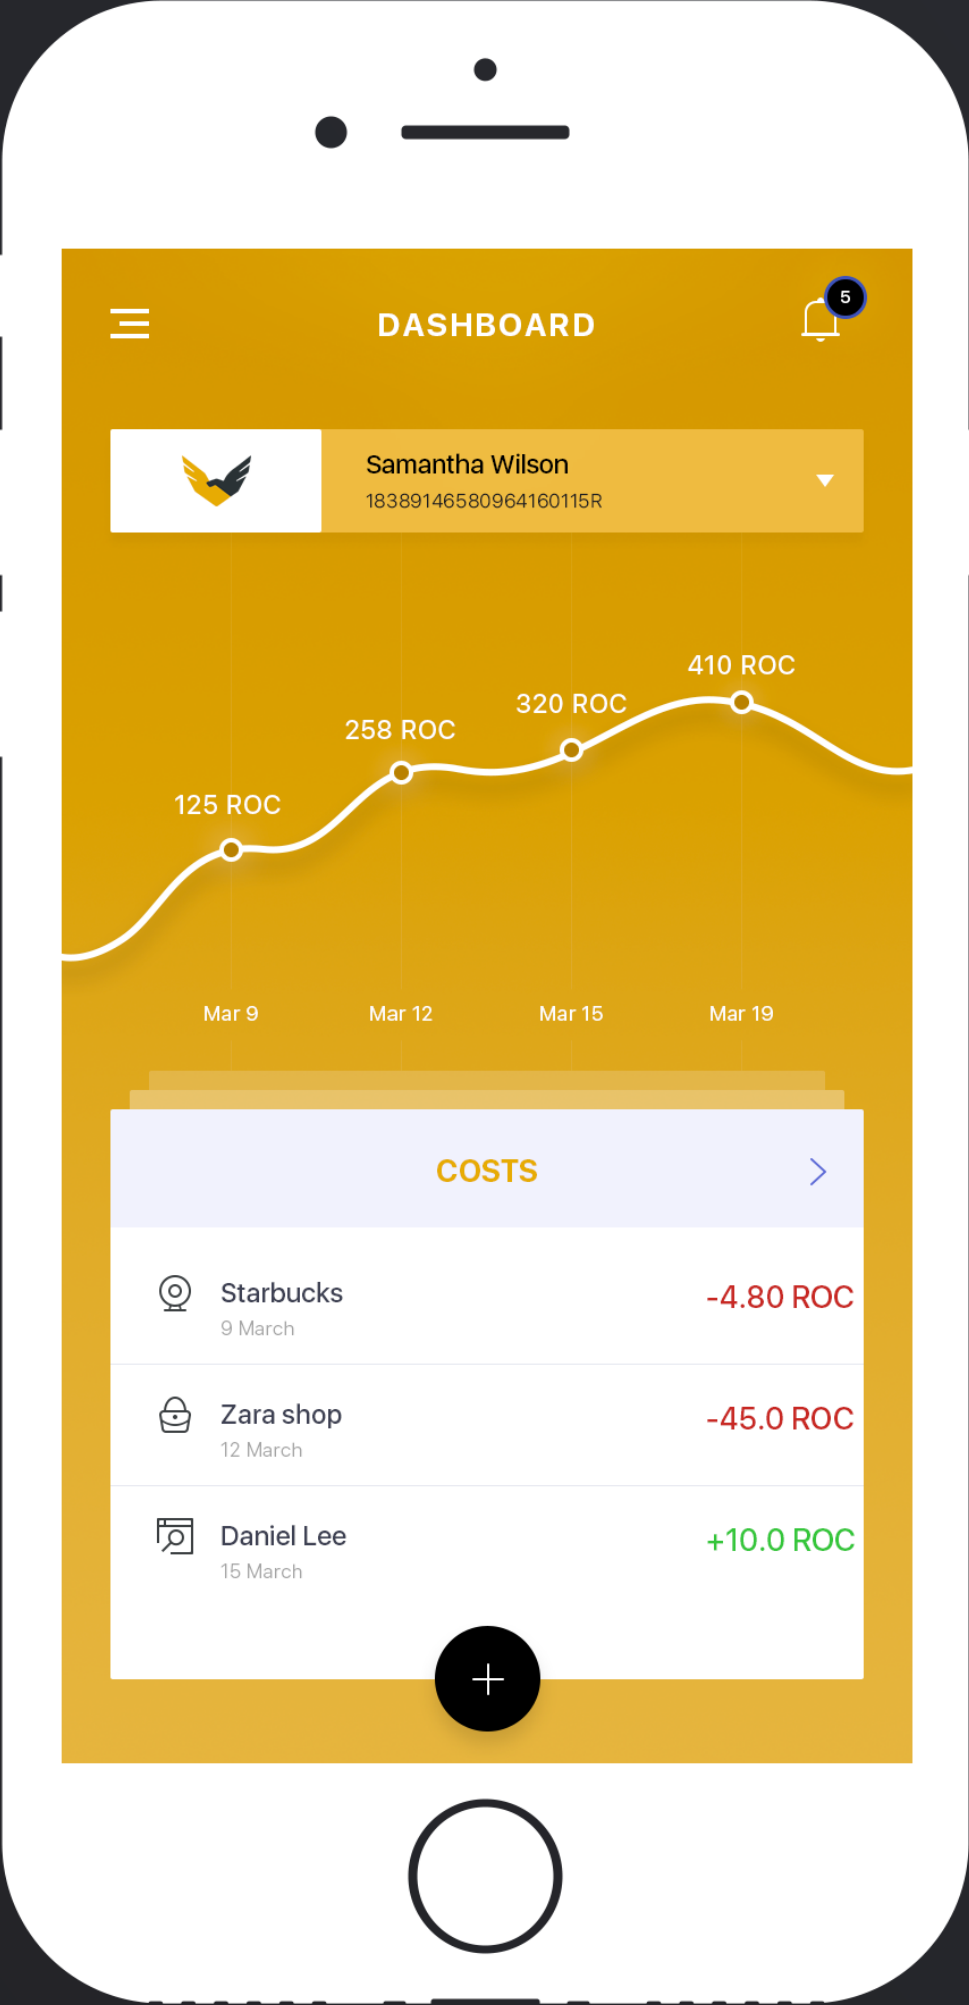

Decentralized

Using the enhanced version of Delegates Proof-of-Stake consensus algorithm called iDPOS developed by Roburst Network Team, the network is immune with various attacks.

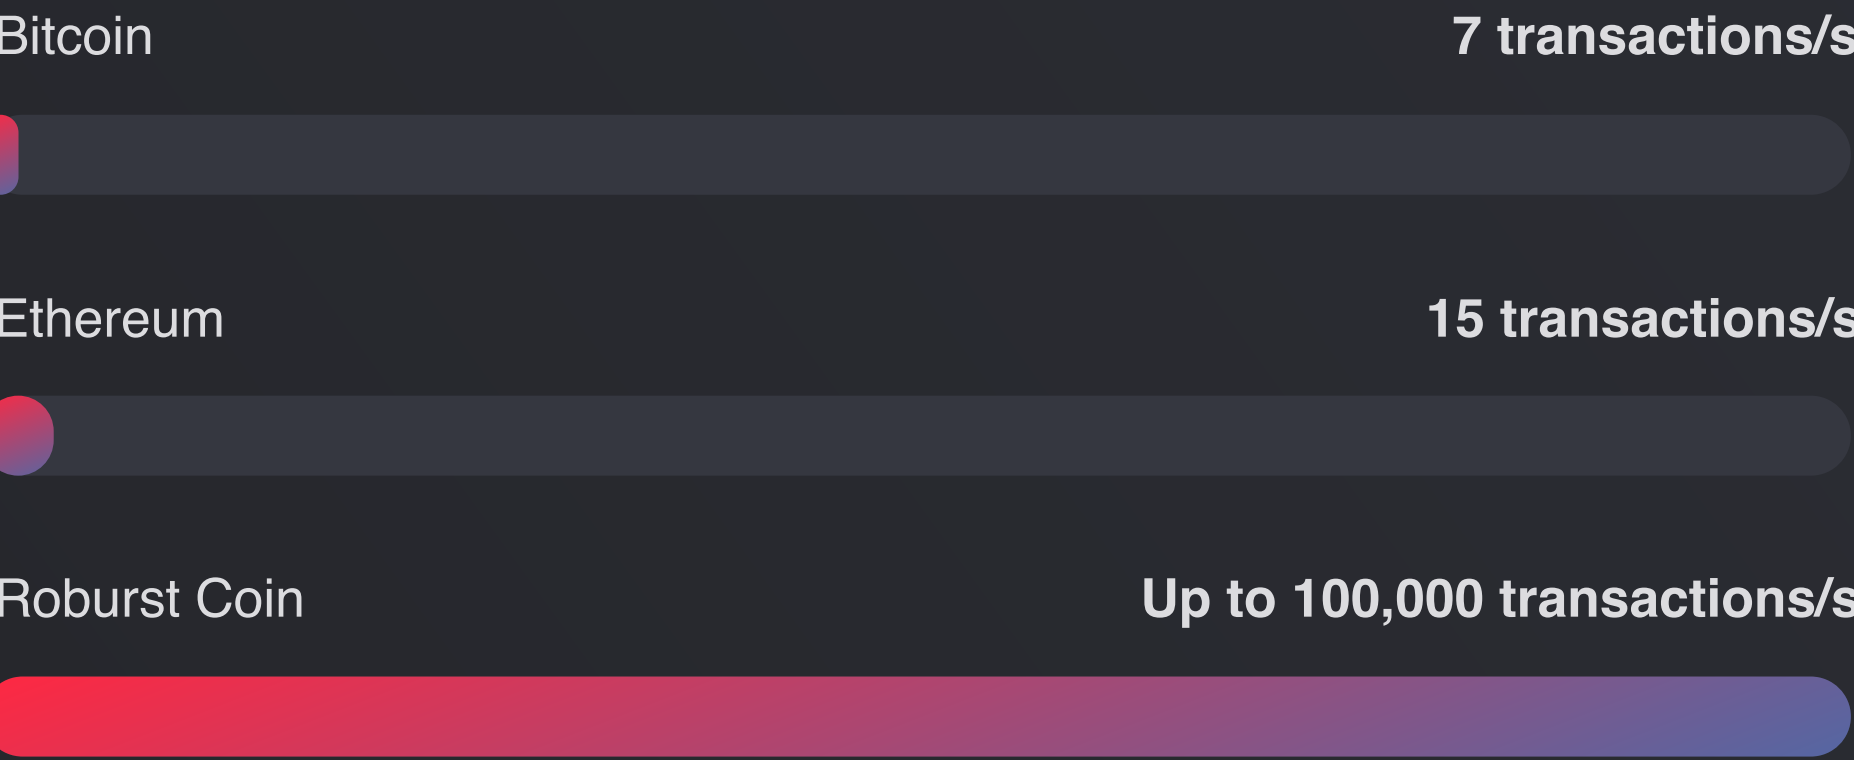

RoburstBridge

A technology that helps Roburst Network communicate with other blockchains as well as creating side chain, enabling the ability of cross-chain transaction.

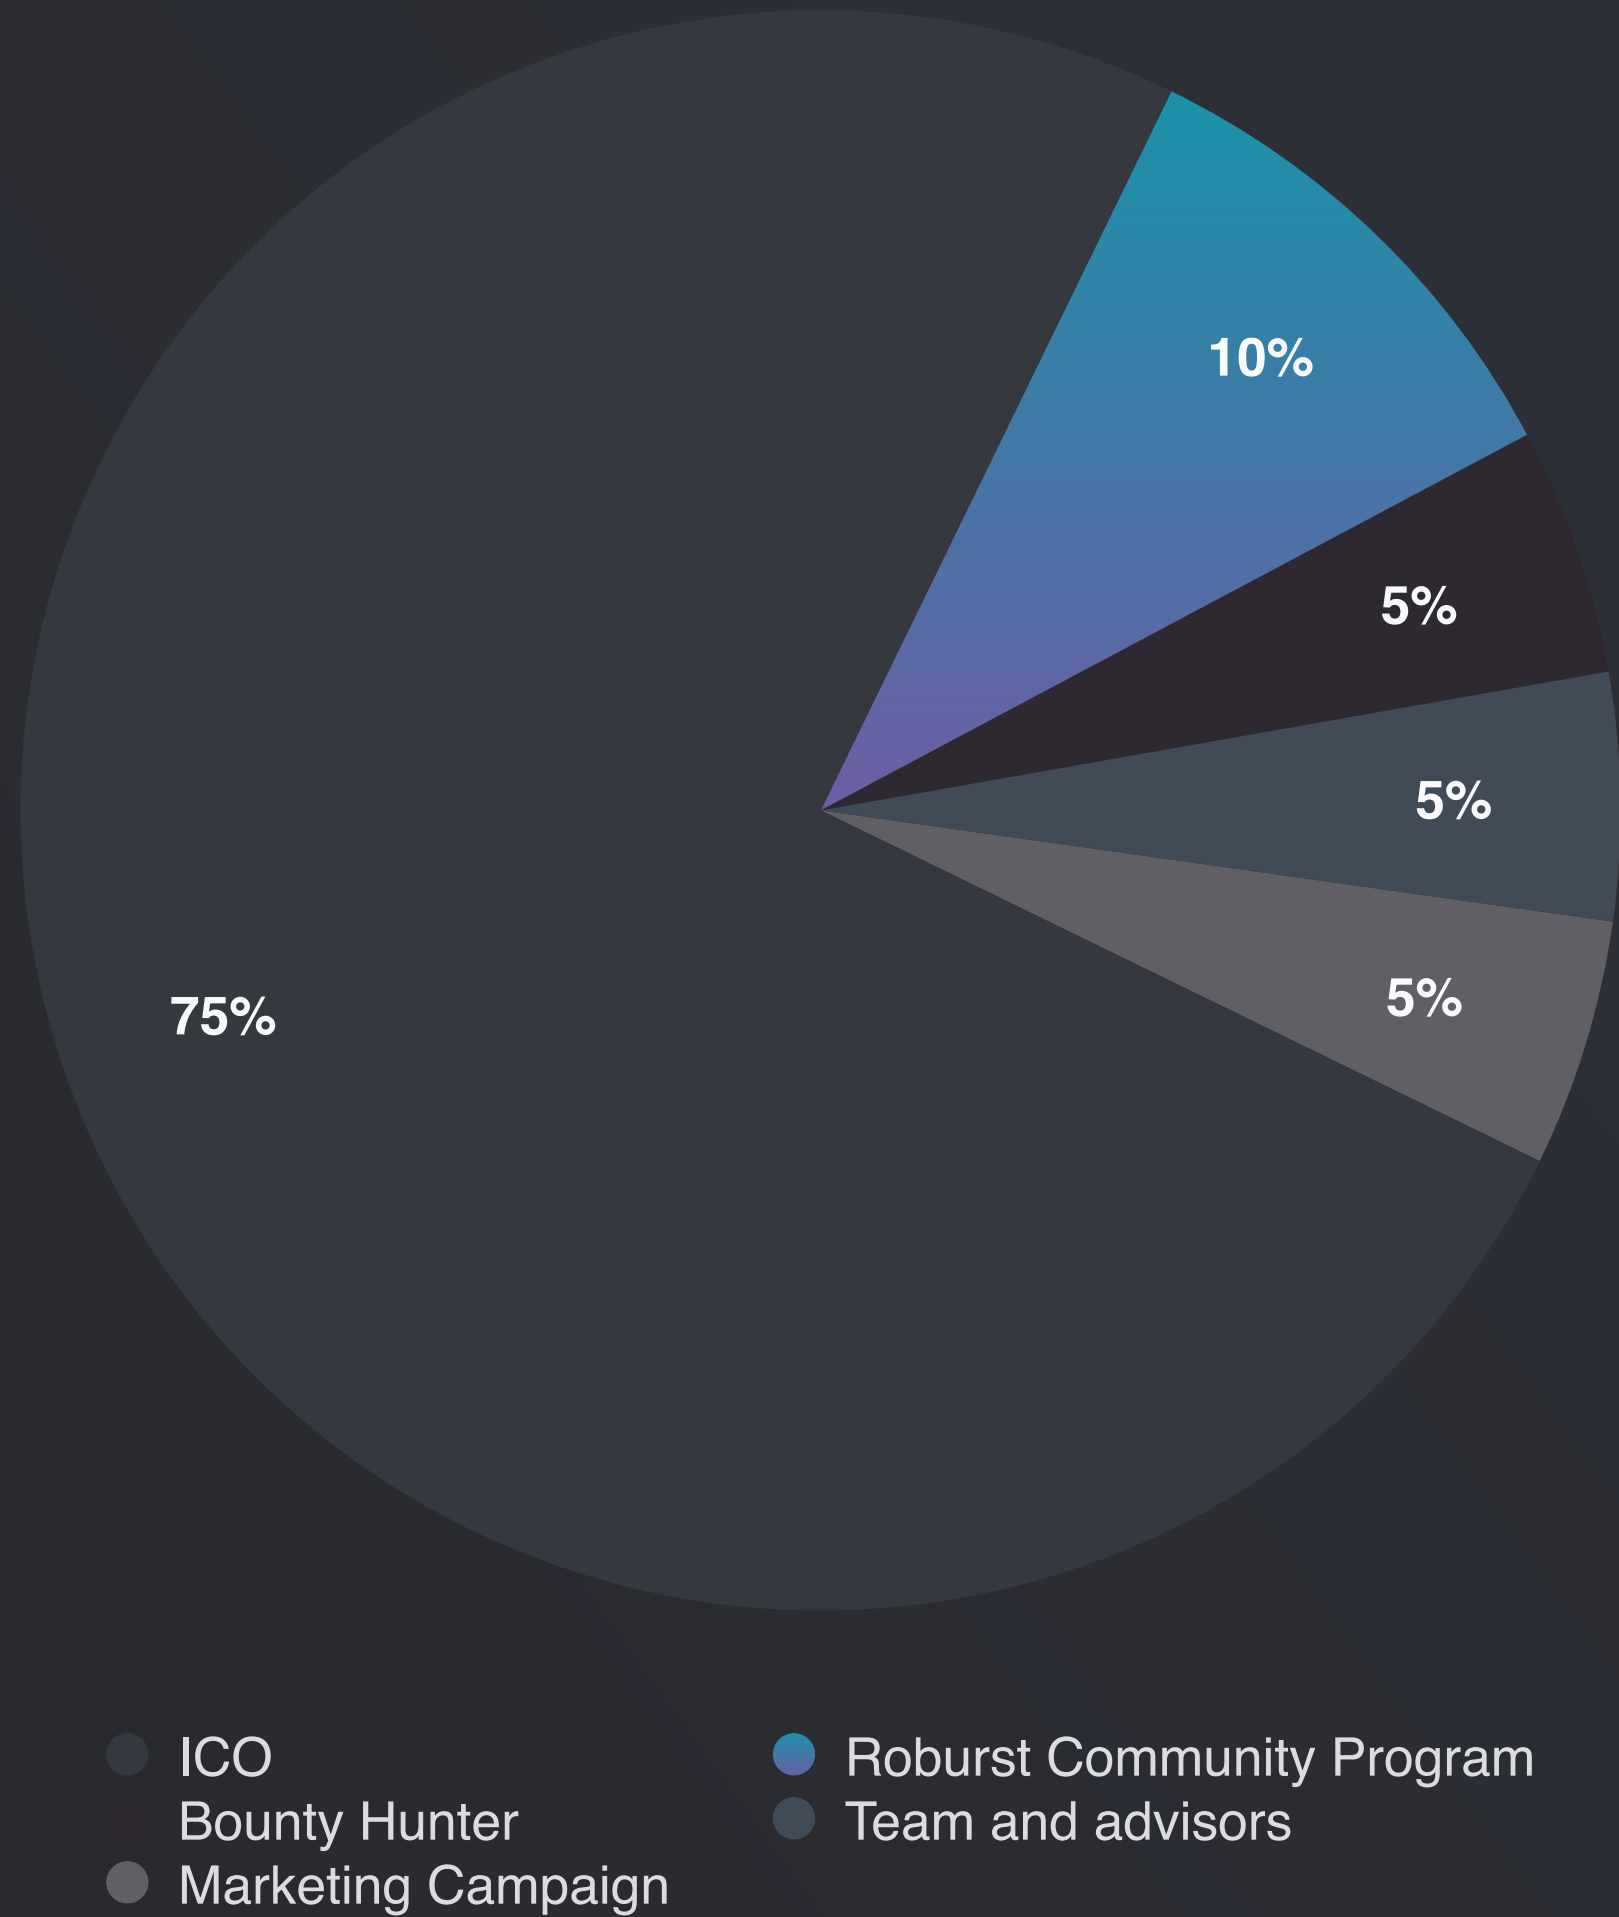

Pay on-the-go

With Roburst Network, cashless payment is easier than ever. You can just tap and go. iDPOS consensus algorithm makes Roburst Network processes transaction at the speed of 100,000 transactions per second, faster 2x than Visa and Mastercard combine.

ICO stages

Get ready for the next generation of cashless payment by joining the pre-sale event with bonus up to 50%. The distribution plan for the crowd sale stage is illustrated by the following charts:

Roburst Trading

Trading never been that easy. You can choose between two modes: manual or automatic. With the help of Deep Learning, Roburst Trading Bot can help you decide which investment is the most profitable. Or you can just switch to manual mode, Roburst Trading Bot will give you a 24 hours prediction just in case you need some help
